

## Save Energy and Save Money with SPU's Energy Efficiency Incentives

Shakopee Public Utilities' Energy Efficiency Incentive Program offers commercial and industrial customers rebates for the purchase and installation of qualifying energy efficient products.

To qualify for a rebate, minimum qualifications must be met. Rebate funds are limited. **Contact SPU to confirm program funds are available and to obtain a Rebate Authorization Number before installation.** Rebate programs include:

### Energy Efficient Lighting

According to the U.S. Department of Energy lighting accounts for 30% of the total energy consumption for commercial and industrial buildings in the United States. With recent advances in lighting technology—especially light-emitting diode (LED) and high-performance linear fluorescents—installing energy efficient lighting can be one of the best investments you can make.

SPU's Energy Efficient Lighting program provides incentives to commercial and industrial customers that purchase and install energy efficient indoor and outdoor lighting, lighting controls, sensors, and light emitting diodes (LEDs) in both retrofit and new construction applications.

### Energy Efficient Heating & Cooling

A wide variety of heating and cooling technologies are available to help reduce energy consumption, resulting in significant energy cost savings.

SPU offers rebates for the installation of energy efficient air conditioning units, air source heat pumps, geothermal heat pumps, as well as chillers.

### Variable Frequency Drives (VFDs)

VFDs optimize motor system efficiency, significantly reducing operational costs with typical energy savings up to 50%.

### Retrocommissioning Study

Retrocommissioning is a systematic, documented process for identifying no- and low-cost improvements that can improve the efficiency and performance of an existing building's direct digital controls (DDC) or process controls.

SPU will reimburse 50% of the study cost upon completion of the study. The remaining 50% of the study cost will be reimbursed after the study projects with a payback of two years or less have been completed and verified.

### Custom Incentives

Rebates are available for energy efficiency projects not covered under the programs listed above. Visit [www.spucweb.com](http://www.spucweb.com) for details.

## Get Your Rebate Faster

- Ensure project meets required qualification standards.
- Contact SPU to confirm rebate funds availability and to obtain a Rebate Authorization Number.
- Submit the rebate application within 90 days of receipt of pre-approval. Rebate funds are held for 90 days; any extensions must receive SPU approval.
- Complete ALL information—including contractor information—on the rebate application as well as the rebate claim sheet(s).
- Sign and date the rebate application.
- Include all required documents with the rebate application.
- Retain a copy of the rebate application for your records.

If there is information on the claim form that you are unsure of, contact your dealer or SPU representative.
